

****Description:****

This Python script checks whether a given number is prime or not. It defines a function ``is_prime(number)`` that returns ``True`` if the input number is prime and ``False`` otherwise. The script then takes user input, applies the function, and prints the result.

****Usage:****

1. Run the script.
2. Enter a number when prompted.

****Function:****

- ``is_prime(number)``: Returns ``True`` if the input number is prime, and ``False`` otherwise.
